*The above signs vary depending on length of addiction, amount of meth used, and the method in which it is taken.

For more information on the dangers of methamphetamine, contact the Orange County Drug Free Coalition at 407-836-7335 or www.drugfreecoalition.org

WHAT IS A METHAMPHETAMINE LAB

- Meth is often made in clandestine labs in a variety of locations, such as houses, motels apartments, vehicles, or wooded areas.
- Many of the chemicals used to make Meth are hazardous and may result in fire or explosion.

HOW TO RECOGNIZE A METHAMPHETAMINE LAB

- Access to property denied to landlords, neighbors or other visitors.
- Fans blowing out windows, blinds pulled or windows blackened.
- Burn pits, stained soil or dead vegetation, indicating dumping of chemicals or waste.
- Chemical, solvent or ammonia smells from houses, garages or detached buildings.
